

Accessible Forms - a One-page Checklist

- Every field has a visible label; placeholder text is not a label.
- Errors say what went wrong and how to fix it, next to the field.
- Required fields are marked in text, not only with colour.
- The form works with the keyboard alone, in a logical order.
- Body text contrast at least 4.5:1, large text 3:1.
- Do not clear what the user typed when there is an error.
- Time limits can be extended, or are long enough for most people (for example a payment hold).
